The Explosion-proof Binocular PTZ is a cloud platform device with binocular vision capabilities specifically designed for explosive hazardous environments. It employs a dual-camera system and, through specific optical design and image processing algorithms, achieves stereoscopic vision perception, providing richer spatial information and depth perception capabilities. The entire PTZ adopts an explosion-proof structural design, with an enclosure that complies with strict explosion-proof standards, effectively isolating internal electrical components from the external explosive environment to prevent explosion accidents caused by electrical failures. It possesses high-precision motion control capabilities, enabling synchronous rotation and pitch of the binocular cameras. It is widely used in safety monitoring fields such as the petroleum, chemical, and coal mining industries, providing more reliable technical support for monitoring and early warning in hazardous environments.

United States market for Explosion-proof Binocular PTZ is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
