The global Explosion-proof IP Camera market size is predicted to grow from US$ 355 million in 2025 to US$ 467 million in 2031; it is expected to grow at a CAGR of 4.7% from 2025 to 2031.

An IP camera, or Internet protocol camera, is a type of digital security camera that receives and sends video footage via an IP network. They are commonly used for surveillance. Unlike analog closed-circuit television cameras (CCTV), IP cameras do not require a local recording device, only a local network. Explosion-proof IP Camera is purpose-built to monitor operations and control processes in hazardous locations with risks of explosion.

An explosion-proof IP camera is a camera specially designed for installation in hazardous environments. It has the characteristics of explosion-proof and explosion-proof, and is suitable for places where explosive gas, steam or dust exist, such as chemical plants, petroleum refineries, mines, etc. Explosion-proof IP cameras are designed with special materials and structures to ensure that they will not spark or explode in explosive environments. The camera is dustproof and waterproof, and can work stably for a long time in harsh environments. Explosion-proof IP cameras support network connection and have the basic functions of IP cameras, which can transmit video and audio signals through the network for remote monitoring and control. Cameras usually support high-definition images and can provide clear and detailed video surveillance. Explosion-proof IP cameras have good high temperature resistance and can adapt to work in high temperature environments. Camera housings and materials are typically corrosion-resistant for long-term use in chemically aggressive
