Production Capacity is about 650,000 units. An Explosion-proof Isolation Valve is a safety-critical device designed to prevent the propagation of explosions (flame fronts and pressure waves) through ducts or pipelines by rapidly isolating sections of a process system during an explosion event. Upstream, it relies on heavy-duty valve bodies, sealing elements, sensors (pressure, flame, or optical detectors), actuators, control units, and certified explosion-protection engineering and manufacturing technologies. Downstream, Explosion-proof Isolation Valves are widely deployed in dust collection systems, pneumatic conveying lines, silos, reactors, and process equipment across industries such as chemicals, pharmaceuticals, food processing, energy, and metals, where controlling explosion spread is essential for protecting personnel, assets, and regulatory compliance.
