The Explosion-Proof Quadruped Robot is a mobile robotic system that integrates explosion-proof design with biomimetic locomotion capabilities. Its core innovation lies in combining explosion-proof safety mechanisms with quadruped biomimetic gait control technology. The robot encapsulates critical electrical components within explosion-proof enclosures, employs flameproof power sources and signal transmission interfaces, and is equipped with redundant safety monitoring modules to ensure safety in flammable and explosive environments. Its quadruped structure, based on biomechanical principles, features multi-degree-of-freedom joints and adaptive gait planning algorithms, enabling flexible movement and posture adjustment in complex terrains while complying with stringent explosion-proof standards for mechanical strength, electrical insulation, and thermal management, making it suitable for hazardous environment operations where both mobility and safety are critical.
