The global External Concrete Vibration Equipment market size is predicted to grow from US\$ 156 million in 2025 to US\$ 213 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

An External Concrete Vibration equipment is a construction tool used to consolidate freshly poured concrete and remove air bubbles to ensure a smooth and uniform finish. It operates by vibrating the concrete, allowing it to settle and eliminate any voids or gaps within the mixture. The external concrete vibrator is typically a handheld or mounted device that is applied externally to the concrete formwork or surface.

The External Concrete Vibration equipment is typically powered by electricity, compressed air, or a gasoline engine. It has an eccentric weight or a vibrating head that generates high-frequency vibrations when it spins. The vibrator is applied to the surface of the concrete, and the vibrations penetrate the mixture, allowing it to flow and settle, ensuring proper compaction and uniformity.
