External Hydraulic Expansion Packer is a specialized type of packer used in oil and gas wells to create a seal between the casing or liner and the wellbore wall, typically in open hole completions. Unlike internal packers that seal within the tubing or casing, this packer is mounted externally on the casing or liner string. It operates by applying hydraulic pressure from the surface, which expands an elastomeric or metallic sealing element outward to make contact with the surrounding formation. This method provides a high-integrity, long-term seal for zonal isolation, cement assurance, or selective stimulation. External hydraulic expansion packers are valued for their reliability, ease of deployment, and effectiveness in high-pressure, high-temperature (HPHT) environments.

United States market for External Hydraulic Expansion Packer is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for External Hydraulic Expansion Packer is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
