The global Extreme Pressure (EP) Lubricity Tester market size is predicted to grow from US$ 36.92 million in 2025 to US$ 52.97 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

In 2024, the global production of Extreme Pressure (EP) Lubricity Tester was approximately 7,800 units, with an average selling price of about US$4,600 per unit. Single-line capacity was approximately 500 units per year, with an average gross profit margin of about 25%. Extreme Pressure (EP) Lubricity Tester is a specialized instrument used to measure the lubrication performance of drilling fluids. It tests the lubrication effect of drilling fluids under extreme pressure by simulating the high pressure and friction conditions during the drilling process, thereby evaluating and determining the appropriate type and dosage of lubricating additives and predicting potential wear rates.

Upstream core involves raw materials and core components, mainly including metal materials, electronic components, and software (for data acquisition and analysis). Downstream applications are highly focused on the oilfield technical services sector, primarily used in laboratories for the performance research, quality inspection, and optimization of oil-based drilling fluids and their lubricating additives, directly serving drilling fluid formulation optimization and wear prediction.
