According to this study, the global Extreme Ultraviolet Lithography (EUL) market size will reach US\$ 29180 million by 2031.

Extreme ultraviolet lithography is a next-generation lithography technology using an extreme ultraviolet (EUV) wavelength, currently expected to be 13.5 nm.

The market in APAC is likely to account for the largest share in 2018. Major drivers for the rapid growth of the EUV lithography market in APAC are the growing number of wafer processing capability and increasing demand for miniaturized devices. TSMC, the world's leading foundry acquiring more than 50% of the revenue, has started investing in the expansion of its wafer-processing capability and has planned to invest in EUV lithography. The foundry holds the highest number of wafer-processing capabilities than any other leading players in the semiconductor manufacturing industry.
