The global Extruded Flat PP Honeycomb Panel market size is predicted to grow from US\$ 191 million in 2025 to US\$ 274 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

In 2025, global production of extruded flat PP honeycomb panels reached 8.51 million square meters, with an average selling price of US\$23 per square meter. Extruded flat PP honeycomb panels are lightweight sandwich panels made primarily of polypropylene (PP). The process involves continuous extrusion of film/sheets, thermoforming, folding, and melting/hot-pressing to form the honeycomb core. These panels can be further laminated online or offline with PP film, PET nonwoven fabric, or CFRT/FRP/metal layers. They are characterized by low weight, high specific stiffness, water and corrosion resistance, thermoforming capability, and recyclability. Applications include commercial vehicle and refrigerated/dry truck body panels, passenger car trunk floors and underbody panels, RV/van floors and interior panels, marine and rail vehicle interiors, building envelopes and formwork, logistics reusable packaging boxes and partitions, prefabricated bathroom fixtures, pool wall panels, industrial shelving, and some photovoltaic-related components. The upstream of the industry chain is centered on PP resin, supplemented by nucleating/flame retardant/impact modifiers, PP barrier films, PET nonwoven fabrics, adhesives, and surface materials such as FRP, CFRT, aluminum plates, HPL, wood boards, and mineral boards; the midstream consists of manufacturers of continuous extrusion and sandwich composite processing of honeycomb cores; the downstream is concentrated in transportation equipment, building assembly, logistics packaging, and industrial interior decoration. Gross profit margins range from approximately 15% to 35%.
