The global Extruded Grade PETG market size is predicted to grow from US\$ 728 million in 2025 to US\$ 1104 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

Extruded-grade PETG resin is a thermoplastic polyester material designed for extrusion molding processes (such as extrusion and injection molding). It is based on PET (polyethylene terephthalate) and is modified by copolymerization with cyclohexanedimethanol (CHDM). The addition of CHDM in its molecular chain inhibits crystallinity, giving the material high transparency (light transmittance > 90%), excellent melt strength and processing fluidity. It can be stably extruded or injection molded within a temperature range of 220-260°C to form complex structural products such as sheets, pipes, and films. The resin is both impact-resistant, chemically resistant (resistant to grease, alcohol, etc.) and food-grade safe (compliant with FDA standards). It is widely used in food packaging, medical equipment, 3D printing filaments and other fields, and has become an environmentally friendly solution to replace PVC and acrylic due to its recyclable properties.

United States market for Extruded Grade PETG is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
