## Abstracts

The global Extruded PP Plastic Honeycomb Panel market size is predicted to grow from US\$ 191 million in 2025 to US\$ 274 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

In 2025, global production of extruded PP plastic honeycomb panels reached 8.51 million square meters, with an average selling price of US\$23 per square meter. Extruded PP plastic honeycomb panels are lightweight sandwich panels made primarily of polypropylene (PP). The process involves continuous extrusion of film/sheets, thermoforming, folding, and melt/hot-press bonding to form the honeycomb core. They can be further laminated online or offline with PP film, PET nonwoven fabric, or CFRT/FRP/metal surface layers. Its core is not the traditional segmented honeycomb structure, but a continuous thermoplastic honeycomb structure. It features low weight, high specific stiffness, water and corrosion resistance, thermoforming capability, and recyclability, making it suitable for high-volume, short-cycle, and cost-sensitive applications. Applications cover commercial vehicle and refrigerated/dry truck body panels, passenger car trunk floors and underbody panels, RV/van floors and interior panels, marine and rail vehicle interiors, building envelopes and formwork, logistics reusable packaging boxes and partitions, prefabricated bathroom fixtures, pool wall panels, industrial shelving, and some photovoltaic-related panels. The upstream of the industry chain is centered on PP resin, supplemented by nucleating/flame-retardant/impact modifiers, PP barrier films, PET nonwoven fabrics, adhesives, and surface materials such as FRP, CFRT, aluminum plates, HPL, wood panels, and mineral boards. The midstream consists of manufacturers of continuous extrusion and sandwich composite processing of honeycomb cores. The downstream is concentrated in transportation equipment, building assembly, logistics packaging, and industrial interiors. Gross profit margins range from approximately 15% to 35%.
