In 2024, global Extrusion Coating Lamination Machine for Packaging production reached approximately 308 units, with an average global market price of around K US$ 386.5 per unit. Extrusion Coating Lamination Machine for Packaging is a specialized industrial equipment designed to produce multi-layer composite packaging materials by integrating extrusion coating and lamination processes—two core steps that bond a molten polymer film (as the adhesive or functional layer) with one or more substrate materials (e.g., paper, plastic film, aluminum foil) to enhance packaging performance. Its core structure includes an extruder , a die head, a laminating station, a cooling system, and a winding unit. It is widely used in the packaging industry to manufacture composite materials for applications such as food packaging (e.g., snack bags, milk carton liners), medical packaging (e.g., sterile device pouches), and industrial packaging (e.g., heavy-duty shipping sacks), as it enables efficient production of multi-layer structures with tailored properties while reducing process steps and environmental impact from solvent-based adhesives.
