Eyeglass lens coating refers to thin layers applied to lenses to improve performance and durability, including anti-reflective, scratch-resistant, hydrophobic, UV-protective, and blue-light filtering coatings. The supply chain starts with chemical producers of silanes, oxides, and polymers, moves to lens manufacturers applying coatings via vacuum or dip processes, and ends with distribution to eyewear brands, optical retailers, and healthcare providers, ultimately reaching consumers seeking clearer vision, comfort, and protection. The eyeglass lens coating industry operates with an estimated annual production of around 145,000 tons, supported by a global production capacity of approximately 190,000 tons per year, while manufacturers maintain an average gross margin of about 36%. Unit prices typically range between USD 28,000–62,000 per ton.
