F-Theta Lenses, also called Scan Lenses, are a particular type of lenses utilized in combination with XY galvanometer scanners or polygon scanners. They are utilized in a multitude of fields, such as industrial material processing and medical and biotechnological applications. It's very important to note that the lens performance is very dependent of the design and quality of its optical components. Compared to standard lenses, where the laser beam is focused on a spherical surface, f-theta lenses provide a plane focusing surface and constant spot size over the entire XY image plane.
