The fabric bursting strength tester is a precision instrument used to detect the bursting strength of fabrics under vertical pressure. It simulates the tearing process of the material under external force and measures the force required during the tearing process to evaluate the tearing resistance of the material. The fabric bursting strength tester is widely used in the quality control and R&D process of textiles. By evaluating the tear resistance of fabrics, we can help optimize the production process, improve product quality, and ensure that textiles are not prone to breakage during use, thereby ensuring consumer safety.
