Fabric-reinforced silicone hose is a composite structure hose that adds one or more layers of high-strength fabric (such as polyester fiber, nylon or aramid) to the silicone base material as a reinforcing skeleton. This design significantly improves the hose's pressure bearing capacity, tensile strength and structural stability while retaining the excellent temperature resistance, aging resistance and biocompatibility of silicone materials. Fabric-reinforced silicone hoses are widely used in the fields of industry, food, medicine, and automobiles. They are suitable for conveying liquids, gases or semi-fluid media, and are especially suitable for complex working conditions that require high flexibility and durability.
