Face Liveness Detection API is a callable, lightweight application programming interface integrated with deep learning, computer vision and biometric recognition technologies, dedicated to verifying whether the detected face source is a real living person instead of forged malicious attacks (including photos, videos, 3D masks, screen replays, AI deepfake images/videos) in face recognition scenarios; it captures face image or real-time video streams via terminal devices (mobile phones, cameras, tablets), extracts dynamic biological features (micro-expressions, facial muscle movements, skin texture depth, blood flow changes) or triggers active interaction to collect characteristic data, conducts real-time algorithmic analysis and feature matching, and returns clear verification results (liveness pass/fail) with confidence scores to the calling system, supporting quick integration with various software platforms and terminals, and acting as a core security barrier for face-based identity authentication to block identity theft and fraud risks.
