A face mask is a loose-fitting, disposable device that creates a physical barrier between the mouth and nose of the wearer and potential contaminants in the immediate environment. Facemasks are not to be shared and may be labeled as surgical, isolation, dental or medical procedure masks. They may come with or without a face shield. Facemasks are made in different thicknesses and with different ability to protect you from contact with liquids. These properties may also affect how easily you can breathe through the facemask and how well the facemask protects you.

The global product types of Face Mask include disposable masks and reusable masks. Among them, disposable masks have the largest output value, accounting for about 84% of the total market share in 2019.
