FAK is a non-receptor protein tyrosine kinase that plays a vital role in cell adhesion, migration, proliferation, and survival, and is closely associated with the development, progression, invasion, and metastasis of various tumors. By blocking its signaling pathway, FAK inhibitors can inhibit cancer cell proliferation and metastasis while enhancing sensitivity to radiotherapy, chemotherapy, and immunotherapy. Currently, the main types of FAK inhibitors include small molecule ATP-competitive inhibitors, allosteric inhibitors, and dual-target inhibitors.

United States market for FAK Inhibitors is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for FAK Inhibitors is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
