## Abstracts

The global Falling Film Tubular Evaporators market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

It is a kind of heat transfer equipment commonly used in chemical, pharmaceutical, food and other industrial fields. Its main structure is composed of tube bundles, shells, inlet and outlet pipes, and condensers. In the evaporation process, the substance to be evaporated is heated and vaporized, and then transported to the inside of the evaporator shell through a series of tubes. When passing through the tube bundle, the material forms a thin film with the wall and slides down, resulting in a process of heat transfer and mass transfer with the heat source in the high-temperature shell, and finally evaporates water or other components, and flows into the lower collector to achieve the purpose of evaporation.

United States market for Falling Film Tubular Evaporators is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
