## Abstracts

The global Fan Convectors market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Fan convectors operate effectively at system water temperatures as low as 35°C. A standard domestic radiator is essentially designed to operate at much higher temperatures, around 70°C, and while it is theoretically possible to run them at lower temperatures, their performance and heat output is dramatically reduced and their physical size is substantially increased. To operate close to their optimum efficiency, heat pumps should be paired with modern fan convectors to minimise on running costs and carbon emissions.

United States market for Fan Convectors is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Fan Convectors is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
