Fan-In Packaging Technology is a crystal-encapsulated integrated circuit (IC) technology, and it is not a single core piece that is cut on the crystal surface, but is then assembled and sealed. The technology is crystal manufacturing machine stretching, and the use of traditional manufacturing machine tools. The position of the convex block (sphere) on the surface of the I/O connecting core for the heavy new distribution layer. Convex block with printed circuit board (PCB) assembly work and capacity layout layout. The convex block is provided according to the application process. The technology and other ballast array (BGA) are based on the CSP's differences, and are not required to be connected to a key line or an internal device.

Major megatrends such as 5G deployment, artificial intelligence, and in-vehicle infotainment are the key factors in the market development, holding a bright future for the fan-in packaging technology market.
