Fan negative ion generator is a device that generates negative ions and releases them into the air through the fan. Negative ions are molecules or atoms that acquire one or more electrons and have negative charges. These ions exist naturally in nature, especially in areas with high water concentration, such as waterfalls, beaches and forests. Negative ions are associated with various health benefits, including improving mood, increasing energy and reducing stress. They can also help purify the air by

neutralizing positively charged ions (such as dust, pollen and other allergens) and removing odors. The fan negative ion generator works by using high voltage charges to generate negative ions. These ions are then blown into the air by the fan, producing a fresh air stream. Some models also include filters to help remove particles from the air.
