The global Fanless PC market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A fanless PC eliminates the need for a fan within the system. The functionality of fanless PCs is similar to that of conventional PCs, but they are used for specific applications in the military and defense, industrial, and consumer segments. The need for fanless PCs arises in certain applications where it is necessary to reduce the noise from PCs. This is achieved by using components that consume less power and by using fewer moving parts in the system.

The PCs segment accounted for the major shares of the fanless PC market. Factors such as the increased utilization of fanless rugged PCs in sectors such as defense and military and industrial sectors will contribute to the growth of this market segment in the coming years. Advantages such as high levels of performance with the capability to handle extensive computing tasks will also drive the demand for rugged and industrial fanless PCs.
