Far Infrared Balls are specialized ceramic or mineral-based spheres that emit far infrared radiation (FIR) when activated by heat or moisture. These balls are typically infused with natural elements like germanium, tourmaline, clay, or other rare earth minerals, which absorb energy and then re-emit it as FIR wavelengths (typically in the 4–14 μ m range). This range is known to penetrate the skin and stimulate biological functions at the cellular level. Far infrared balls are widely used in water purification systems, spa treatments, healthcare products, and thermal therapy devices to promote detoxification, improve circulation, enhance water quality, and support metabolic activity.
