The Faraday cup aerosol electrometer is a high-precision instrument designed based on the Faraday cage principle. It is mainly used to measure the charge of aerosol particles and indirectly determine the particle number concentration through the correlation between current and particle concentration. Its core working principle is to collect charged particles through a conductive filter, discharge them using a high-resistance resistor and measure the current, and finally calculate the concentration by combining parameters such as volume flow rate and particle charge number.

United States market for Faraday Cup Aerosol Electrometer is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Faraday Cup Aerosol Electrometer is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for Faraday Cup Aerosol Electrometer is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
