The global Faraday Tent market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A Faraday tent, also known as a Faraday cage or shielded tent, is a structure designed to block external electromagnetic fields. It is named after the English scientist Michael Faraday, who discovered the principle of electromagnetic shielding.

The purpose of a Faraday tent is to create an enclosed space that is shielded from electromagnetic interference (EMI) and electromagnetic radiation (EMR). The tent is made of conductive materials, such as metal mesh or metal-coated fabric, that form a continuous conductive enclosure. This enclosure effectively blocks or attenuates external electromagnetic fields, preventing them from entering or exiting the enclosed space.
