Farm-raising Bluefin Tuna refers to the practice of cultivating this premium apex predator in controlled marine environments, primarily through "ranching" or "full-cycle aquaculture." Tuna Ranching is the most prevalent commercial method, where wild-caught juveniles or sub-adults are transferred to massive offshore sea cages and fattened on a high-protein, high-lipid diet (such as sardines and mackerel) to achieve specific size and fat marbling (Toro) requirements. Full-cycle Aquaculture, on the other hand, involves the complete closed-loop process of hatching eggs in a laboratory and raising the fish to maturity in captivity. This advanced method aims to eliminate the industry's reliance on wild stocks, providing a more sustainable and predictable supply chain for the global high-end sashimi market.

In 2025, global Farm-raising Bluefin Tuna production reached approximately 70,000 tons, and average price was US$30/kg, with gross margin 15%.

United States market for Farm-raising Bluefin Tuna is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Farm-raising Bluefin Tuna is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Farm-raising Bluefin Tuna is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
