Fast drying thinner is a type of solvent or chemical mixture used to thin paints, coatings, and other substances that need to dry quickly after application. It is typically composed of volatile organic compounds (VOCs) such as acetone, toluene, or xylene, which evaporate quickly when exposed to air. This rapid evaporation helps the paint or coating to dry faster, reducing the overall drying time compared to regular thinners or solvents. Fast drying thinners are commonly used in industries where quick turnaround times are crucial, such as automotive painting, industrial coatings, and certain types of artistic applications.
