Fat oxidants (also known as fat antioxidants) are a class of substances that can delay or prevent the oxidation of fats and oils in food. During food processing, storage and transportation, oils and fats easily react with oxygen in the air, causing food to deteriorate, darken in color, and produce bad odors. Fat oxidants inhibit or slow down this oxidation process by capturing and scavenging free radicals, or through other mechanisms, thereby extending the shelf life of food and maintaining food quality.

The global Fat Oxidizer market size is projected to grow from US\$ 307 million in 2024 to US\$ 406 million in 2030; it is expected to grow at a CAGR of 4.8% from 2024 to 2030.
