## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

After the vehicle is started, the fatigue detection system analyzes the typical behavior of the driver and continuously evaluates the angular velocity of the steering wheel. Visual, audible or sensory alerts, such as vibrations in the seat or steering wheel, are triggered in the event of a steering maneuver that deviates from the driver's typical behavior. After two hours of continuous driving, the suggested break reminder is activated.
