The report requires updating with new data and is sent in 48 hours after order is placed.

Fatty alcohol alkoxy ether is a non-ionic surfactant, which is formed by connecting hydrophobic alkyl chains (fatty alcohols) through ether bonds and hydrophilic alkoxy chains. Fatty alcohol alkoxy ethers can be used as weak foaming agents for household detergents, dishwashing agents, and food cleaning products. The water solubility of fatty alcohol alkoxy ether is greatly affected by the number of carbon atoms in the alcohol structure and the number of carbon atoms in the added alkoxy group. The more carbon atoms in the alkoxy water, the better the water solubility and the better the cleaning ability.
