Fatty alcohol defoamers are a type of antifoaming agent used to control and prevent foam formation in various industrial processes and applications. These defoamers are typically formulated using fatty alcohols as a key component, along with other additives. Fatty alcohols are aliphatic alcohols derived from natural sources such as coconut oil or palm oil.

As environmental and sustainability concerns continue to grow, manufacturers are increasingly favouring the development and use of environmentally friendly defoamers. These products are typically more biodegradable, have a lower environmental impact and may be made from renewable raw materials. Food and beverage processing is an important market that requires defoamers to control foaming to ensure product quality

and consistency. Consumer demands for food safety and cleanliness standards are also increasing in this sector. The biotechnology sector is seeing an increasing demand for high performance defoamers that can be used in processes such as biofermentation, cell culture and pharmaceuticals to improve production efficiency and ensure product quality. Some industries and applications require specific types of defoamers to meet their unique needs. As a result, defoamer manufacturers are increasingly inclined to offer customised solutions to meet the needs of different industries. The development of defoamers continues to evolve as science and technology continue to advance and industry needs change.
