The global Fatty Amides Lubricants market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Fatty Amides Lubricants are mainly divided into interacid amides, oleic acid amides, and stearyl amides. Erucamide is prepared from monounsaturated C22 erucic acid.

Oleamide is derived from C18 monounsaturated oleic acid. Oleamide is generally considered to be a fast-release slip agent because it migrates to the film surface at a faster rate than erucamide. Although erucamide migrated more slowly than oleamide, the COF of films treated with erucamide was lower than that of oleamide after a certain time.

When the fatty acid amide must also provide an anti-stick effect, stearylamine is usually employed. Stearamide belongs to another class of slip agents, mainly used in combination with oleamide or erucamide. In general, inorganic anti-blocking agents such as silica are most commonly used, but sometimes, in applications where transparency of the film is important, fatty acid amides are used to impart an anti-blocking effect to the material. Among the fatty acid amides, the best antistick properties are obtained using stearylamine, but it is not as effective as erucamide or oleamide in reducing COF.

United States market for Fatty Amides Lubricants is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Fatty Amides Lubricants is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
