Fattyalkyl Dimethyl Tertiary Amine is an important surfactant intermediate, which is synthesized from fatty alcohols or fatty acids through catalytic amination reaction and has excellent surface activity and chemical stability. Its molecular structure contains two methyl groups and one tertiary amine group. It is widely used in the preparation of cationic, zwitterionic and non-ionic surfactants. It is also a key raw material for fine chemical products such as antistatic agents and lubricants. In recent years, with the tightening of environmental protection regulations and the increase in consumer demand for green products, the industry has gradually transformed towards low toxicity and easy degradation, which has promoted the optimization of production processes and the development of new materials.

United States market for Fattyalkyl Dimethyl Tertiary Amines is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
