FC interface tape library is a tape storage device that uses Fibre Channel technology to achieve high-speed and reliable data transmission. It combines the high bandwidth, low latency and strong reliability of fiber channel to provide efficient data storage and backup solutions for data centers, cloud computing service providers, enterprises and institutions. The FC interface uses optical fiber as the transmission medium, which can support data transmission rates of up to several GB/s to meet the needs of large-scale data storage and backup. Fibre Channel technology has the advantage of long-distance transmission, which enables FC interface tape libraries to be deployed in a wider range of network environments and adapt to data centers and application scenarios of different sizes. The FC interface uses advanced error detection and correction mechanisms to ensure the accuracy and reliability of data transmission. At the same time, the tape library itself also has high fault tolerance and redundant design to ensure data security and stability. Tape libraries usually use a combination of multiple tape drives and tape cartridges to provide massive storage space. With the development of tape technology, the storage capacity of a single tape is also constantly increasing, further meeting users' needs for large-capacity storage.

The global FC (Fibre Channel) Interface Tape Library market size is projected to grow from US$ 281 million in 2024 to US$ 377 million in 2030; it is expected to grow at a CAGR of 5.0% from 2024 to 2030.
