Single-line annual production capacity averages 180 k units with a gross margin of approximately 30-35%. The upstream of FDA-cleared Wearable HST Devices primarily includes sensors, microprocessors, and wireless modules, which are concentrated in the semiconductor and electronics fields; the downstream applications are mainly through online sales, accounting for about 70%, with offline sales accounting for about 30%. With the increasing awareness of health and the development of telemedicine, the demand for these devices has been rising year by year; the business opportunity lies in the significant market potential, especially in the fields of smart homes, chronic disease management, and personalized medicine, where technological innovation and brand differentiation are key to enterprise competition.

The FDA-cleared Wearable HST Devices represent a cutting-edge technological solution that integrates advanced sensor technology with wireless connectivity, enabling precise and continuous monitoring of sleep patterns and vital signs outside of a clinical setting. This system comprises compact, wearable devices that seamlessly collect data on a patient's breathing, heart rate, and movement, which is then transmitted in real-time to a secure cloud platform for analysis. The clearance signifies that these devices have met the FDA's rigorous standards for accuracy, safety, and efficacy, offering a non-invasive and convenient option for individuals seeking to monitor their sleep health. The ability to continuously track sleep patterns and provide actionable insights supports

more personalized and proactive healthcare management, facilitating timely interventions and improved patient compliance with treatment protocols.
