FEA Analysis Software (Finite Element Analysis Software) is a professional tool that simulates and analyzes engineering structures and physical phenomena through numerical calculation methods. Finite Element Analysis (FEA) decomposes complex physical problems into small discrete units, and simulates the performance of materials and structures under various physical conditions such as external forces, heat, vibration, and electromagnetic fields through mathematical models and numerical methods. FEA software provides an intuitive modeling interface and powerful solving capabilities. It can analyze various geometric shapes and material properties, generate stress distribution, displacement field, deformation mode and other results, thereby helping engineers predict structural performance, optimize product design, verify experimental data and reduce development costs during the design stage.

United States market for FEA Analysis Software is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
