A feed delivery system is a mechanized solution designed for the automated transportation and distribution of animal feed in agricultural settings. Utilized primarily in livestock farming, this system streamlines the process of delivering feed to various locations within a farm, such as feeding troughs or bins. Feed delivery systems often incorporate conveyors, augers, or pneumatic tubes to transport bulk feed from storage areas to designated feeding points. The automation of feed delivery reduces manual labor, enhances efficiency in feeding operations, and ensures a consistent and controlled supply of nutrition to the livestock. This technology is commonly employed in modern animal husbandry practices, contributing to improved farm management and overall productivity.
