The global Feed Escapements market size is predicted to grow from US\$ 773 million in 2025 to US\$ 1054 million in 2031; it is expected to grow at a CAGR of 5.3% from 2025 to 2031.

Feed escapements are used for individually feeding parts from hoppers, conveyors, magazines, tracks, and vibratory feeders. By separating parts at the ends of feed chutes or raceways, these pneumatic devices prevent jams and multiple feeds. Feed escapements are equipped with retractable and extendible components called fingers that provide positive part control.

According to our Fee Research Center, in 2022, global total production of feed was about 1.2 billion tons. Key producing regions are Asia, Europe and North America, top ten countries hold about 65% of global feed production. China, United States, Brazil and India, as the top four countries, accounted for half of the total feed production.
