The global Feed Grade Potassium Bicarbonate market size is predicted to grow from US$ 29.35 million in 2025 to US$ 40.7 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

Feed grade potassium bicarbonate is a potassium source mainly used in animal feed. It is an inorganic salt with the chemical formula KHCO3. It is usually used as a potassium supplement to enhance the nutritional value of animal feed, especially for poultry and livestock that require high potassium levels. In 2024, global Feed Grade Potassium Bicarbonate production reached approximately32474 Tons, with an average global market price of around US$ 32474 per ton.The mainstream single production line has an annual production capacity of about 1000 tons.

Upstream: The core raw materials are potassium carbonate or potassium chloride+carbon dioxide, and the cost is dominated by price fluctuations of basic chemical raw materials (especially potassium salts).

Midstream: The production technology (mainly carbonization method) is mature, but feed grade products require strict purification and quality control, with barriers lying in qualification certification and stable production capabilities.

Downstream: The application is highly concentrated in the field of feed additives. As a high-quality potassium source and acidity regulator, the demand is growing synchronously with the development of high-end animal husbandry.

United States market for Feed Grade Potassium Bicarbonate is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through
