The global Feed Grade Potassium Iodate market size is predicted to grow from US$ 39.41 million in 2025 to US$ 58.1 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

Feed grade potassium iodate is a mineral additive commonly used in animal feed, mainly providing iodine elements to prevent iodine deficiency in animals. It is a white crystalline or crystalline powder with stable chemical properties and easy to soluble in water. It is widely used in animal husbandry, poultry and aquatic feed. Iodine is an essential trace element in the animal body and is a necessary ingredient that makes up thyroxine. Iodine deficiency leads to significant enlargement of the thyroid glands of cattle and sheep, while pigs give birth to hairless piglets and have more stillbirths. Potassium iodide, sodium iodide, potassium iodate, diiodol salicylic acid, calcium iodate, etc. can be used as iodine additives. In 2024, global Feed Grade Potassium Iodate production reached approximately 6098 Tons, with an average global market price of around US$ 6250 per Ton.The annual production capacity of a single production line is 500 tons, and the gross profit margin is about 30%.

Upstream core raw materials: iodine (I?); potassium hydroxide (KOH) or potassium carbonate (K?CO?): Provides a potassium source and reacts with iodic acid to produce potassium iodate. Feed-grade specifications must be used. Oxidants such as potassium chlorate (KClO?) or hydrogen peroxide (H?O?): Used to oxidize iodine to iodine acid.

Downstream Core Customers: Premixed Material Manufacturers, this is the most mainstream channel. Potassium iodate is added as a trace element to 0.5%-5% compound premix and then sold to a full-price feed factory.
