Feed grade shrimp products refer to shrimp-derived materials—including undersized whole shrimp, processing by-products (heads, shells, and tails), or damaged specimens—that are processed specifically for animal nutrition rather than human consumption. While they may not meet the aesthetic or sensory standards required for the food industry, they are strictly regulated to ensure they are free from pathogens and chemical contaminants. These products serve as a high-quality protein source (typically 40%-60%) for the aquaculture and pet food sectors and are rich in essential amino acids, astaxanthin, and chitin. Beyond basic nutrition, their potent natural aroma acts as an effective feed attractant to improve palatability, while their functional compounds support immune health and pigmentation in livestock, representing a vital component of a sustainable circular bio-economy.

In 2025, global Feed Grade Shrimp Products production reached approximately 665 K MT, and average price was US$1,000/MT, with gross margin 20%.
