The global Feed Grade Urea Phosphate market size is predicted to grow from US$ 395 million in 2025 to US$ 544 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

Urea phosphate is a ruminant feed additive that is superior to urea and can provide both non protein nitrogen and phosphorus simultaneously. Feed additive: specifically designed for the nutritional supplementation of ruminant and herbivorous livestock such as cattle and sheep, with significant effects on the feeding of dairy, meat, and young livestock.In 2024, global Feed Grade Urea Phosphate production reached approximately 356.35K MT, with an average global market price of around US$ 1086 per MT.The annual production capacity of a single production line is 15000 tons, with a gross profit margin of around 20%.

Upstream industry: The cost of upstream raw materials accounts for about 80% of the total cost.

1. Basic raw materials:

Phosphate ore: the most fundamental source. The price and supply stability of phosphate ore are greatly influenced by national policies, environmental requirements, and mining quotas.

Sulfur/sulfuric acid: a key raw material for producing wet process phosphoric acid. The price of imported sulfur has a significant impact on costs.

Urea: Originating from the fertilizer industry, its price exhibits significant cyclicality.
