## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Feed grade vitamin C derivatives refer to compounds derived from vitamin C (ascorbic acid) that are suitable for use in animal feed and nutrition. These derivatives are specifically formulated and manufactured to meet the nutritional requirements of animals and to promote their health and well-being.

Animals, like humans, require vitamin C for various physiological functions, but unlike humans, many animals are capable of synthesizing their own vitamin C. However, there are certain species, such as guinea pigs, certain birds, and fish, that cannot produce their own vitamin C and require dietary supplementation.

The global Feed Grade Vitamin C Derivatives market size is projected to grow from US\$ 2488 million in 2024 to US\$ 3616 million in 2030; it is expected to grow at a CAGR of 6.4% from 2024 to 2030.
