A feed-off-the-arm sewing machine is a specialized type of industrial sewing machine where the fabric is fed away from the machine's arm rather than towards it. This design features an arm that extends from the machine's main body, allowing for easier manipulation of bulky or large pieces of fabric, such as those used in garment construction or upholstery. The feed mechanism is positioned off to the side, which facilitates smoother feeding and stitching of complex shapes and large items without the need to handle the fabric manually. This type of machine is particularly useful in the production of items like sleeves, cuffs, and other curved or intricate fabric pieces, where traditional feeding methods may be cumbersome. The feed-off-the-arm design enhances productivity and precision by providing better control and visibility during the sewing process, making it ideal for high-quality and efficient garment manufacturing.

The global Feed-Off-The-Arm Sewing Machine market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
