Feed plant proteins are crucial components in animal nutrition, providing essential nutrients for livestock, poultry, and aquaculture. These proteins are derived from various plant sources such as soybeans, peas, canola, sunflower seeds, and other legumes and grains. They serve as a sustainable and cost-effective alternative to animal-based proteins like fishmeal and meat by-products. Feed plant proteins support animal growth, health, and productivity by supplying vital amino acids, promoting muscle development, and enhancing overall feed efficiency. Additionally, they contribute to the sustainability of the agricultural sector by reducing reliance on animal protein sources, lowering environmental impacts, and supporting the circular economy through the utilization of agricultural by-products.

The global Feed Plant Protein market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
