The global Feed Yeast market size is predicted to grow from US\$ 1738 million in 2025 to US\$ 2369 million in 2031; it is expected to grow at a CAGR of 5.3% from 2025 to 2031.

Yeasts have been used in feed for many years. Both the Bovine Spongiform Encephalopathy crisis (mad cow disease), and the increasing concern of customers about their diet have led to an increased use of 'clean' protein sources, such as Yeast, in animal feed.

Feed Yeast is in many cases brewer's yeast (although it can be baker's or distiller's or lactic yeast) which has been inactivated by heat treatment.

The various nutritional components of Feed Yeast - which are similar to those of Food Yeast - help the animals to metabolise proteins, lipids and carbohydrates. Yeast has a relatively high lysine content and Protein Efficiency Ratio. It also contains other nutrients such as glutathione, inositol and choline. Feed Yeast stimulates the growth of the infant and young in many animal species. It can also provide a widespread protection of animals against diseases thanks to the stimulation of the immune system through yeast beta-glucans and mannans.

Glutathione is a sulphur containing tripeptide which is an important cellular antioxidant. Inositol and choline play an important role in liver and nervous tissue functions.

Global Feed Yeast key players include Lesaffre, Cargill, Lallemand, Alltech, Nutreco, etc. Global top five manufacturers hold a share about 30%.

North America is the largest market, with a share about 40%, followed by China, and Europe, both have a share about 40 percent.

In terms of product, Spent Yeast is the largest segment, with a share over 35%. And in terms of application, the largest application is Poultry, followed by Livestock, Aquatic, etc.
