A feeding bottle and nipple are essential infant care products designed to provide milk or formula to babies. The feeding bottle is a container, typically made of BPA-free plastic, glass, or silicone, used to hold liquids. The nipple, attached to the top of the bottle, is a soft, flexible spout—usually made of silicone or rubber—that mimics the mother's breast and allows the baby to suck milk comfortably. Together, they offer a convenient and hygienic solution for infant feeding, especially when breastfeeding is not possible or needs to be supplemented.

The global market for feeding bottles and nipples is growing steadily, driven by increasing awareness of infant nutrition, rising birth rates in developing countries, and the growing number of working mothers. Product innovation, including anti-colic designs, ergonomic shapes, and temperature-sensitive materials, has further boosted demand. Asia-Pacific is the largest and fastest-growing region, with countries like China and India leading in consumption due to population size and improving healthcare access. E-commerce, especially cross-border online retail, has also expanded the reach of premium feeding products. However, concerns over material safety, counterfeit products, and environmental impact from disposable bottles pose ongoing challenges. Overall, the market remains promising with a strong focus on safety, convenience, and

health-conscious parenting.
