Feline Infectious Peritonitis (FIP) Antivirals are drugs developed to treat feline infectious peritonitis caused by mutated feline coronavirus. These agents primarily act by inhibiting viral replication, blocking viral protease activity, or interfering with viral RNA synthesis. Representative compounds include the nucleoside analog GS-441524 and the protease inhibitor GC376. Some antiviral candidates have demonstrated remarkable clinical efficacy in experimental and field studies. The development of FIP antivirals represents a significant advance in feline virology and marks a key area of innovation in the veterinary pharmaceutical industry.
